EXECUTIVE SUMMARY

Over the past two decades, the integration of digital technology in K–12 education has accelerated rapidly. Today's educational landscape is characterized by a proliferation of digital applications—exceeding 500,000 offerings across platforms—that support learning, assessment, communication, and administration. This report examines the multifaceted impact of using multiple educational apps on children's schooling, as well as on the experiences of parents, teachers, and district curriculum leaders. By analyzing survey data collected from over 100 teachers, 125 parents, and 50 K-12 curriculum leaders, this study quantifies usage patterns, satisfaction levels, and the administrative burdens imposed by the current digital ecosystem.

Key findings reveal that while private school and district decision-makers that have chosen to adopt a suite of apps from the myriad options available to them tend to view the app ecosystems they've created optimistically—confident in their educational benefits and assuming broad stakeholder satisfaction—the realities experienced by teachers and parents differ markedly. Parents, managing a suite of diverse applications, report significant challenges that translate into heightened frustration and time burdens. Teachers, while recognizing the potential instructional benefits, express moderate dissatisfaction, largely due to the administrative work required to navigate multiple platforms. These discrepancies underscore the need for more streamlined, integrated digital solutions that address the divergent expectations and experiences of all stakeholders.

66

"The amount of apps and the amount of time required to look at each one makes it impossible for parents with jobs. There has got to be an easier way to work with our children and their schools."

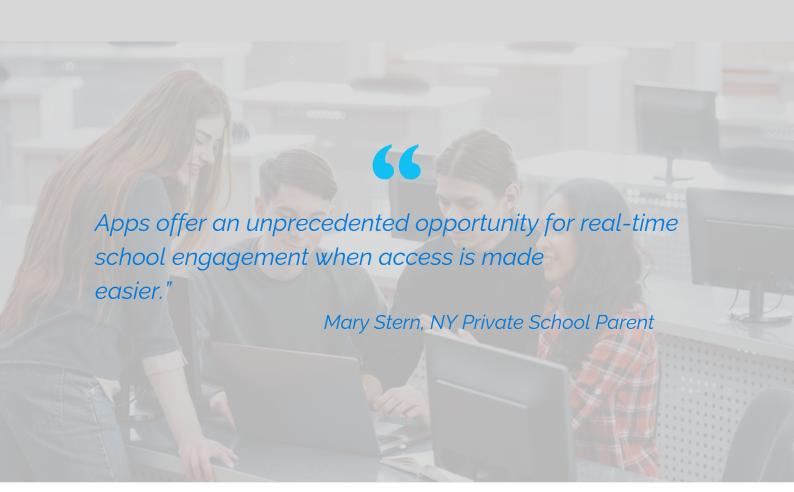

> Jason C., Public School Parent, Montgomery County Maryland

I. INTRODUCTION

BACKGROUND AND CONTEXT

The digital revolution in education has led to transformative changes in how schools deliver instruction, communicate with families, and manage student data. Once limited to isolated computer labs, technology is now embedded in every aspect of learning, with nearly every student having access to personal devices. In parallel, the education market has exploded with digital tools—from instructional apps and assessment platforms to reporting systems and parent engagement solutions. This abundance of resources offers unprecedented opportunities for personalized learning and real-time analytics aimed at improving student outcomes; however, it also introduces challenges in terms of usability, administrative complexity, data security risk, and stakeholder engagement.

STUDY OBJECTIVE AND SCOPE

The primary objective of this study is to quantify the challenges associated with the use of multiple educational applications in K-12 settings and to develop recommendations that address these challenges.

The study focuses on three key constituencies:

Parents:

Specifically, parents
whose children are
actively engaged with
three or more
educational apps. The
research examines the
number of apps in use,
their usability,
consistency, and the
impact on both
educational outcomes
and parental stress.

Teachers:

Educators who utilize multiple digital tools in the classroom. The study evaluates the balance between instructional use and the administrative burden imposed by a suite of apps, as well as teachers' overall satisfaction and perceived benefits.

District curriculum and instruction leaders:

Decision-makers

responsible for selecting and implementing educational technology.

This group's perspectives on the effectiveness of these apps, as well as their assumptions about the experiences of parents and teachers, are critically analyzed.

By comparing these perspectives, the study aims to reveal gaps between administrative assumptions and on-the-ground realities, ultimately providing actionable insights for improving digital integration in K–12 education.

II. PURPOSE OF THE STUDY

This research addresses several critical questions:

App quantity and variety: What is the range of educational apps deployed in K-12 schools, and how do these numbers vary across different school settings? Data indicate that district leaders report a common usage pattern of 10-15 apps, which highlights a substantial ecosystem of tools in place.

Usage patterns: How frequently are these apps used by teachers, parents, and students? The study explores daily usage frequencies, the duration of app engagement, and the typical contexts in which these apps are accessed (e.g., at home versus in school).

Stakeholder perspectives: What are the experiences and perceptions of teachers and parents regarding app usability, educational benefits, and administrative workload? Surveys reveal a divergence in satisfaction levels, with parents indicating considerable challenges in navigating across the suite of apps educators may have chosen for them, while teachers express moderate dissatisfaction stemming from the extra workload imposed by non-instructional challenges of making apps work together.

Administrative considerations: How do district leaders manage app licensing, updates, and training, and what are their perceptions of the overall effectiveness of the app approach? Although district leaders generally maintain confidence in the technology's benefits, they appear less attuned to the frustrations reported by teachers and parents

III. METHODOLOGY

RESEARCH DESIGN

The study employed an independent, survey-based research method, gathering quantitative and qualitative data from three distinct groups: parents, teachers, and education organization curriculum leaders. A stratified random sampling approach ensured that participants represented a diverse cross-section of school types (public, charter, and private), geographical regions, and socioeconomic backgrounds. All respondents were located in North America.

DATA COLLECTION

Surveys were administered over a five-week period from December 2024 to January 2025. Surveys addressed apps that were designed to be used between students, parents & educators.

Survey instrument: Developed in consultation with survey design experts and piloted extensively, the instrument included both structured questions (with

predefined answer options) and openended questions to capture experiential insights.

Participant counts: Over 100 teachers, 125 parents, and 58 curriculum leaders (spanning both district and private school environments) participated in the study.

Data integrity: Both online and inperson data collection methods were used to minimize bias. Randomized question ordering and stratified sampling further enhanced the reliability and neutrality of the responses.

ANALYTICAL FRAMEWORK

Data analysis focused on key themes such as the number of apps in use, time spent on app-related tasks (both instructional and administrative), satisfaction ratings, and qualitative feedback. The results were then synthesized to highlight differences in perspectives among the three stakeholder groups and to identify actionable areas for improvement.

66

Apps are hard because we have multiple ways of communicating with parents in MCPS (Canvas, StudentVue/ParentVue, and email) so it often feels like we are never reaching them since they get bombarded on multiple apps."

Reyna C., MCPS HS Teacher

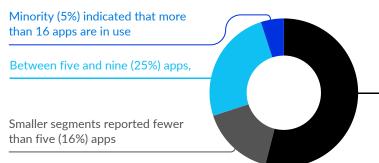

IV. FINDINGS FROM DISTRICT AND PRIVATE SCHOOL CURRICULUM LEADERS

SURVEY DEMOGRAPHICS AND KEY METRICS

Respondent profile: The survey received 58 full responses, with 49 from U.S. schools (31 district-based and 27 private schools, noting that some responses overlapped across categories).

App usage: A majority (54%) of respondents reported that their schools employ between 10 and 15 officially sanctioned educational apps. Smaller segments reported fewer than five (16%) or between five and nine (25%) apps, while a minority (5%) indicated that more than 16 apps are in use.

A majority (54%) of respondents reported that their schools employ between 10 and 15 officially sanctioned educational apps.

Access methods: Half of the respondents indicated that a hybrid access model is in place—combining a centralized portal with individual app launches—while 40% reported that apps are accessed individually and only 10% relied solely on a unified portal.

Teacher engagement: Curriculum leaders estimated that teachers spend approximately 2-4 hours per week using these apps, with only 10% reporting engagement of less than one hour and another 10% exceeding five hours per week.

.5 Administrative burden: In terms of administrative tasks (e.g., data entry, inter-app data transfers), 70% of respondents believed that teachers spend less than one hour weekly, with the remainder reporting between one and two hours or more.

.6 Perceived satisfaction: Curriculum leaders largely rated teacher satisfaction with the multiple-app approach highly-62% indicated a satisfaction score of 8 (on a scale of 1-10), 18% rated it at 9, and only 10% indicated scores of 5 or below. Openended responses suggested that while there is recognition of the challenges, there is also a prevailing belief in the balance between the available options and the support provided to teachers.

INSIGHTS AND INTERPRETATION

The responses from curriculum decision-makers illustrate a confidence in their chosen digital approach. The prevalence of 10-15 apps suggests an expectation of robust functionality across their app suite. Furthermore, these leaders assume that the allocated time for app usage and administration is sufficient, and that teachers' satisfaction levels are high. However, these assumptions contrast sharply with the more critical perspectives from teachers and parents, as detailed in subsequent sections.

Nothing is easy - it's convoluted. We can't email directly the easy way because we have to document everything in one app for teachers and administrators and another for parents.. It's nonsense."

V.

FINDINGS FROM TEACHERS

DEMOGRAPHIC OVERVIEW AND USAGE PATTERNS

School type and teaching level:

Among the 109 teacher respondents, 83% were from public schools and 17% from private institutions. A significant majority (67%) taught at the high school level, with the remaining respondents split between middle (23%) and lower school (10%) levels.

App quantity and frequency:

Approximately 67% of teachers reported using up to four educational apps on a regular basis, while 33% indicated using between five and eight apps. Daily usage was common, with 68% of teachers engaging with these apps every day; a smaller fraction used them on a weekly or less frequent basis.

Access and administration:

When asked whether their schools provided a centralized portal for accessing apps, 69% reported that apps had to be launched individually, compared to 31% who had access to a unified portal. Teachers reported spending over two hours per week on instructional use of these apps (50% of respondents) and an additional administrative burden of less than one hour per week (66% of respondents).

SATISFACTION AND QUALITATIVE FEEDBACK

- Satisfaction ratings: Teacher satisfaction with the multiple-app approach was notably lower than district leaders' assessments. A significant portion (33%) rated their satisfaction at 2 out of 10, with other responses clustering around ratings of 4, 5, and 6. Only a combined 28% provided ratings of 8 or 9, and none awarded a perfect score.
- Qualitative insights: Teachers expressed mixed sentiments. While some
 acknowledged that the apps can be useful when properly integrated, many highlighted
 the inefficiencies and fragmentation inherent in having to manage multiple systems.
 Common themes in teacher feedback included:
 - Fragmented communication: The need to navigate separate platforms for different functions (instruction, assessment, parent communication) disrupts workflow.
 - Administrative disruption: The time required to enter data and transfer information between apps detracts from teaching time.
 - Calls for integration: There is a clear desire for more integrated solutions that consolidate tasks, thereby reducing the cognitive and logistical load on educators.

INSIGHTS AND INTERPRETATION

• Teacher feedback underscores a pragmatic tension: while there is acknowledgment of the educational benefits offered by digital tools, the current multiplicity of applications places an administrative burden that interferes with core instructional responsibilities. This moderate dissatisfaction is rooted in the extra work required to manage these tools—a burden that many feel detracts from their primary role as educators.

The apps we use are helpful but there has to be a better way to achieve all of our goals with less stress."

Teresa M., Private School Teacher

VI. FINDINGS FROM PARENTS

DEMOGRAPHIC OVERVIEW AND USAGE PATTERNS

Respondent profile: The parent survey garnered 125 full responses. Among these respondents, 10% had one child, 52% had two children, 28% had three, and 10% had more than three. In terms of grade levels, 19% had children in lower school, 44% in middle school, and 37% in high school.

App usage: Parents reported using a wide range of educational apps for school-related activities. When asked about the number of apps per child, 14% indicated 1–3 apps, 32% indicated 4–6 apps, 44% indicated 7–9 apps, and 10% reported using more than 10 apps.

Engagement frequency and investment: A majority (52%) of parents use these apps on a daily basis, while 44% reported weekly engagement. The time spent managing these apps varied: 21% spent less than one hour per week (predominantly parents of elementary school children), 39% spent 1-2 hours, 28% spent 2-3 hours, and 12% (exclusively parents of high school students) spent more than three hours per week.

Access methods: Only 21% of parents reported having a unified platform from which all apps could be accessed. In contrast, 68% said they had to launch each app individually, with 11% indicating a hybrid approach.

SATISFACTION AND QUALITATIVE FEEDBACK

- Satisfaction ratings: Parent satisfaction levels were consistently modest. No parent awarded the highest satisfaction ratings; instead, responses clustered toward the lower end of the scale. Specifically, 12% rated their satisfaction at 2, 18% at 3, 13% at 4, and 42% at 5 out of 10. Minimal numbers provided ratings above 5, suggesting a pervasive level of discontent.
- Qualitative insights: Open-ended responses from parents conveyed strong emotional reactions:
 - Many parents described the process of managing multiple apps as akin to solving a "puzzle," with a convoluted and fragmented system that makes it difficult to track their children's academic progress.
 - Time constraints were a recurrent theme, with working parents emphasizing that the extensive time required to navigate these tools was incompatible with their professional and personal responsibilities.
 - The complexity of the digital ecosystem left many feeling uncertain about the true educational benefits, with some questioning whether the administrative burden is justified by the outcomes.

INSIGHTS AND INTERPRETATION

The parental experience, as captured by the survey data, reveals a deep-seated frustration with the current state of digital integration. The necessity to engage with numerous, unintegrated apps creates both a logistical and emotional burden. Parents are left grappling with an overly complex system that, rather than streamlining communication and monitoring, seems to obscure the actual progress of their children. This level of dissatisfaction stands in stark contrast to the more optimistic views held by district administrators.

VII. CONCLUSIONS AND RECOMMENDATIONS

DIVERGENT PERSPECTIVES

A critical analysis of the survey results reveals a clear divergence among the stakeholder groups:

Administrators' optimism:

District leaders and curriculum decision-makers maintain a largely positive outlook on the educational app ecosystem. They report using a robust suite of tools and generally assume that the structure in place is efficient, effective, and well-received by teachers.

Teachers' pragmatic discontent:

Educators, while acknowledging the potential benefits of digital tools, express moderate dissatisfaction due primarily to the administrative overhead and fragmented user experience. The need to switch between multiple platforms interferes with instructional time and overall efficiency.

Parents' heightened frustration:

Parents, who interact
with these applications
to track and support
their children's
education, are markedly
discontented. The
multiplicity of apps,
often lacking integration,
results in significant time
burdens and confusion,
detracting from their
ability to effectively
monitor educational
outcomes.

RECOMMENDATIONS FOR A STREAMLINED DIGITAL ECOSYSTEM

Based on the findings, the following recommendations are proposed to improve the overall digital experience in K-12 education:

Consolidation and Integration:

- **Develop unified portals:** Encourage the adoption of integrated platforms that consolidate multiple functionalities (communication, assessment, reporting) into a single, user-friendly interface.
- **Reduce redundancy:** Reassess the necessity of each app in use to eliminate overlaps and streamline the digital toolkit for both educators and parents.

Enhanced Training and Support:

- Targeted professional development: Provide teachers with comprehensive training that emphasizes efficient app usage and integration strategies, thereby reducing administrative burdens.
- **Parental onboarding:** Offer workshops and support resources to help parents navigate digital tools more effectively, potentially mitigating the time-related and usability challenges they currently face.

Feedback-Driven Policy Adjustments:

- Regular surveys and focus groups: Implement mechanisms for continuous feedback from both teachers and parents. This will ensure that the digital strategies remain responsive to user needs and challenges.
- **Pilot integrated solutions:** Before wide-scale adoption, pilot integrated platforms in select schools to evaluate their impact on satisfaction and administrative efficiency, adjusting policies based on real-world performance data.

Aligning Administrative Perceptions with Frontline Realities:

- Bridge the communication gap: Facilitate regular forums where district leaders, teachers, and parents can share experiences and expectations. This dialogue can help reconcile the optimistic assumptions of administrators with the practical challenges reported by teachers and parents.
- **Data-driven adjustments:** Use the insights gathered from surveys to drive continuous improvement in app selection, training, and integration strategies. Prioritize investments that demonstrably reduce administrative time while enhancing the learning experience.

VIII. DISCUSSION: IMPLICATIONS OF THE DATA

The survey data underscores a critical divergence between the perceptions of district leaders and the realities experienced by teachers and parents—a gap that carries significant implications for the future of digital integration in K–12 education.

REASSESSING THE ROLE OF DIGITAL TOOLS IN INSTRUCTION

The data reveal that while educators recognize the potential benefits of using multiple educational apps—such as enhanced student engagement and real-time performance tracking—the administrative overhead associated with these tools is taking a toll. Teachers report that navigating multiple platforms not only fragments their instructional time but also introduces an additional layer of non-teaching tasks. This administrative burden can lead to a reduction in the quality and quantity of direct student interaction, ultimately affecting learning outcomes. As teachers face increasing demands on their time, there is a risk that the educational advantages of digital tools may be undermined by operational inefficiencies, thereby hindering the overall instructional process.

66

We need a way to maintain our apps and communicate with students and parents without feeling like it is a second job."

Stephanie S., Virginia Public School Teacher

PARENTAL ENGAGEMENT AND THE HOME LEARNING ENVIRONMENT

Parents, who are pivotal in supporting and monitoring their children's academic progress, report considerable frustration with the current digital ecosystem. The necessity to interact with numerous, unintegrated apps forces parents to expend significant time and effort to gather critical information about their children's education. For working families, this fragmented approach not only adds to daily stress but may also lead to disengagement over time. When parents struggle to piece together information from multiple sources, the opportunity for meaningful engagement with educators diminishes. This disconnect can have a cascading effect on student performance, as effective parental involvement is widely recognized as a key factor in academic success.

ORGANIZATIONAL AND ADMINISTRATIVE CHALLENGES

From an administrative perspective, district leaders and curriculum decision-makers appear to be operating under a set of optimistic assumptions regarding the benefits of a diverse app ecosystem. They report a robust deployment of digital tools—often numbering between 10 and 15 apps per institution—and express confidence that teachers and parents are managing adequately. However, the contrasting experiences of frontline educators and parents suggest that this optimistic view may be masking underlying challenges. The lack of integration among these applications leads to inefficiencies in communication, data management, and overall operational effectiveness. As a result, school administrators may be less equipped to assess the true impact of these digital investments on educational outcomes, thereby limiting the potential for data-driven decision-making and strategic planning.

Our school uses an average of 19 apps in our high school and each one deploys differently. Talk about confusing!"

Mary W., Private School Teacher

EQUITY AND ACCESS CONSIDERATIONS

The implications of these findings extend to broader issues of equity and access in education. The survey data indicate that parents in different school settings—public versus private—experience the digital landscape differently. In private schools, where integrated platforms are more common, the experience tends to be slightly less burdensome. Conversely, public school parents often face a more fragmented and time-intensive system. This disparity can exacerbate existing inequities, as the ability to efficiently navigate digital resources is increasingly linked to student support and achievement. If the digital divide continues to widen, it may result in unequal educational opportunities, with long-term consequences for student success and societal equity.

POLICY AND STRATEGIC IMPLICATIONS

Given these insights, educational leaders are encouraged to reexamine and refine their digital strategies. Policymakers should prioritize the development and implementation of integrated digital solutions that reduce complexity and administrative workload for both teachers and parents. By consolidating multiple functions into a unified platform, schools can streamline communication, simplify data management, and free up valuable time for instructional activities. Such a strategic shift is likely to improve overall satisfaction among stakeholders, promote greater efficiency in classroom management, and ultimately enhance student learning outcomes.

66

I wish there was a way to work with our apps from one location. By having to work through so many apps separately, it challenges us all -- teachers, parents, and students.

John C., NYC Public Schools Teacher

THE NEED FOR CONTINUOUS FEEDBACK AND ADAPTATION

The divergent perceptions uncovered by the survey highlight the importance of establishing robust feedback mechanisms within school systems. Regular surveys, focus groups, and collaborative forums that include teachers, parents, and administrators can help ensure that digital initiatives remain responsive to the evolving needs of all stakeholders. Continuous feedback is essential not only for monitoring the effectiveness of existing tools but also for guiding future investments in educational technology. By embracing an adaptive approach, school systems can better align digital strategies with the practical realities of teaching and learning, ensuring that technological advancements translate into meaningful educational benefits.

66

Some of the app/system/program variety is necessary and I think it would make sense to centralize ALL tasks a teacher has to do. It would be nice to see things streamlined."

David P., Maryland Public School Teacher

CONCLUSION

In summary, the implications of the survey data call for a critical reassessment of the current digital landscape in K–12 education. The optimistic assumptions held by district leaders about the efficacy of a multi-app approach are at odds with the day-to-day experiences of teachers and parents. To bridge this gap, there is a pressing need for a more streamlined, integrated digital ecosystem that alleviates administrative burdens and fosters genuine engagement from all stakeholders. Such a transformation not only has the potential to enhance teaching and learning but also to address broader issues of equity and operational efficiency within the educational system. Moving forward, educational leaders must leverage these insights to drive strategic, data-informed improvements that support the long-term success of students and educators alike.

This report was sponsored in partnership with learning platform vendor Edsby. It was prepared using original robust survey data collected over a five-week period during the 2024–2025 academic cycle, and it reflects the experiences of a diverse cross-section of educators, parents, and administrators across both public and private school systems in North America. Further research and continuous feedback will be essential as the digital landscape in education continues to evolve.
